## 6. Risk Calculator - Fire

The following risk estimator is based on the general health and safety risk level estimator contained within BS 8800: 1996. Guide to occupational health and safety management systems.

1. Taking into account the fire prevention measures observed at the time of this risk assessment, it is considered that the hazard from the fire (the probability of ignition) at this building is:

(please insert x below)

LOW ☒      MEDIUM ☐      HIGH ☐

2. Taking into account the nature of the building, the occupants, the fire protection afforded and any procedural arrangements observed at the time of the assessment, it is considered that the consequences for life safety in the event of a fire would be:

(please insert x below)

MINOR ☒      MAJOR ☐      CRITICAL ☐

The definition of the above terms is as follows:

### ***FRA Review Frequency***

|                 |                                                                                                                                                           |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>MINOR</b>    | Outbreak of fire is unlikely to result in serious injury or death of any occupant (other than the occupant sleeping in a bedroom in which a fire occurs). |
| <b>MAJOR</b>    | An outbreak of fire could result in injury of one or more occupants, but is unlikely to lead to fatalities.                                               |
| <b>CRITICAL</b> | There is significant potential for serious injury or death of one or more occupants.                                                                      |

3. The above estimates are then read into the following matrix table to give the overall risk level for the site:

| Fire Hazard | Minor     | Major       | Critical    |
|-------------|-----------|-------------|-------------|
| Low         | Trivial   | Tolerable   | Moderate    |
| Medium      | Tolerable | Moderate    | Substantial |
| High        | Moderate  | Substantial | Intolerable |

When the level of risk is established, the action level can be read from the table below:

| Risk Level  | Guide to actions and appropriate timescales                                                                                                                         |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Trivial     | No action is required                                                                                                                                               |
| Moderate    | Efforts should be made to reduce the risk level and this should be carried out within the specified time periods.                                                   |
| Substantial | Considerable resources may have to be allocated to reduce the risk level. It may be necessary to limit the occupation of some parts until urgent remedial action is |
| Intolerable | The building (or the relevant area) should not be occupied until the risk is reduced.                                                                               |

| Action Plan - Fire                        |                                                                                                           |             |                 |                 |             |
|-------------------------------------------|-----------------------------------------------------------------------------------------------------------|-------------|-----------------|-----------------|-------------|
| 7-12 Heady Hill Court                     |                                                                                                           |             |                 | 20/08/2026      |             |
